## Tips and best practices to help close this care opportunity

This measure focuses on appropriate monitoring for members with schizophrenia or bipolar disorder.

- Be sure to schedule an annual screening for diabetes (HbA1c or blood glucose)
  - The use of CPT® Category II codes helps UnitedHealthcare identify clinical outcomes such as HbA1c test results. It can also reduce the need for some chart review.
  - CPT II Codes that are on a lab claim (POS 81) or include a modifier do not count toward numerator compliance
  - HbA1c test results can be accepted as supplemental data, reducing the need for some chart review. Please contact your UnitedHealthcare representative to discuss clinical data exchange opportunities.
- Sharing member demographic data is critical to understanding the cultural, linguistic and social needs of those we serve and decreasing health inequities across the care continuum. This data can include, but is not limited to, race, ethnicity, language, sexual orientation, gender identity, pronouns, sex assigned at birth and disability status.
    - As part of the UnitedHealthcare clinical structured data exchange program, we encourage you to include this demographic data with any structured data file or CCD. Your information is confidential. UnitedHealthcare will keep personally identifiable information confidential and won't disclose any information without your written consent.
